The General Manager of Railways
Sri Lanka Railways (Department of Railways)

Dear Sir / Madam,

RideTrack: a mobile app for live train tracking and QR ticketing

We are a team of four third-year undergraduates at the Sri Lanka Institute of Information Technology (SLIIT). As part of the IT3060 Human Computer Interaction module we are building **RideTrack**, an Android app that shows passengers where buses and trains are, when they will arrive, and lets them buy a QR ticket that a conductor or ticket inspector scans on board.

Train passengers often wait on platforms without knowing whether a train is delayed, and ticket checks on busy services take time. RideTrack aims to give passengers live arrival information and a paperless QR ticket that a ticket inspector validates with a phone camera, while giving the department a live view of its services and a direct channel for delay alerts.

The app includes a dedicated **transport authority** section in which officers manage vehicles, routes, stops, schedules and fares, watch live operations, review incidents reported by staff, and publish service alerts that reach passengers' phones immediately. We have designed this section with Sri Lanka Railways officers in mind and would value your view on whether it reflects how your work is actually done.

We respectfully request:

- Feedback on the authority and ticket-inspector workflows in the app.
- Guidance on using the publicly published train timetables, stations and fares in the app for demonstration.
- A contact officer, and if convenient, a short demonstration to your team.

A one-page brief describing the app and its current status is attached, followed by a short reply slip. RideTrack is an academic project. It is not affiliated with or endorsed by your department, handles no real payments, and will not be released to the public under your name without your written consent.

Thank you for your time and consideration.

Yours faithfully,

Silva D S J (IT23652200)
Team Leader, RideTrack
Contact: +94 70 417 4576
on behalf of Group Y3.S2.WE_62, SLIIT

Team members: Silva D S J (IT23652200), Rajapaksha M.P.K (IT23665620), Herath H.M.S.G (IT23634626), Fernando H L R D (IT23635302).

RideTrack: Project Brief

What it is

An Android app for Sri Lankan public transport. A passenger first chooses **bus or train**; the whole app then shows only that type. Three user roles share one live database:

Role	What they can do
Passenger	Search routes, filter and sort trips, see stops and facilities, track a vehicle live on a map, book and pay (simulated), keep a QR ticket, cancel, view history, receive alerts.
Conductor / inspector	Sign in as staff, view the assigned journey, scan and validate QR tickets, see passenger counts, report incidents and delays, complete the journey.
Transport authority	Manage vehicles, routes, stops, schedules, fares and facilities; preview and publish changes; watch live operations; review incidents; publish alerts.

Links between roles: (1) the passenger's QR ticket is scanned by the conductor; (2) a conductor's incident report reaches the authority; (3) an authority alert appears in passengers' notifications.

Current status

Area	Status
Design (requirements, prototypes, user testing)	Complete: 42 screens designed and tested with users
Passenger search and live tracking (8 screens)	Built. Home reads live data; other screens use sample timetables. Vehicle movement is simulated from the timetable.
Booking and QR tickets (11 screens)	In development
Conductor / inspector (10 screens)	In development
Transport authority (13 screens)	In development; shared database and security rules prepared
Testing and release	Functional, integration and usability testing (5+ participants) to follow; Android APK release

Technology and data

- React Native with Expo (SDK 57), TypeScript, Google Maps; Firebase Firestore and Authentication for real-time data and role-based sign-in.
- Payments are simulated; no card or bank details are collected.
- All route, timetable and fare data in the app is currently sample data prepared by the team, not official data.
- Access to the database is controlled by role-based security rules; passenger data is used only for tickets and alerts.

How Sri Lanka Railways could benefit

- Delay and cancellation alerts published once, delivered to every affected passenger's phone.
- Inspectors validate QR tickets with a phone camera; reused tickets are rejected.
- A live operations map and incident reports from on-board staff in one place.

Reply Slip

Please complete and fax back, or call Silva D S J on +94 70 417 4576

Organisation	Sri Lanka Railways (Department of Railways)
Responding officer	
Designation	
Phone / email	

Please tick all that apply

☐	We are willing to give feedback on the authority section of the app.
☐	We are willing to attend a short demonstration (in person or online).
☐	You may use our publicly published timetables, stations and fares in the app for demonstration.
☐	Please contact the officer named above for further discussion.
☐	We are not able to assist at this time.
